

Implant system

IPX - ICI
Internal Connection

Just one **connection**, multiple **possibilities**

Galimplant Clásico System

Our dental implants are manufactured from **Grade IV Titanium**. They feature an **11° internal conical connection** and a **single prosthetic platform**. The **internal thread** of the **standard implants** is **1.6 mm**.

IPX Macroscopic implant design that favors great primary stability in any situation.

Tools

Dual Screwdriver (LLDC 174, LLDC 220 y LLDL 290)

These wrenches have a double function, they serve both to give manual torque and to use with a ratchet. Available in 3 lengths: 17,4, 22 and 29 millimeters.

ASC Dual Screwdriver (LLDP 220 y LLDP 290)

These wrenches have a double function, they serve both to give manual torque and to use with a ratchet for ASC. Available in 2 lengths: 22 and 29 millimeters.

Manual Screwdriver (LLMC 220 y LLML 290)

These wrenches allow you to torque manually. With rotating crown and perforated for thread guides. Available in 2 lengths: 22 and 29 millimeters.

Ultra short Screwdriver (LLCA 097)

This wrench allows you to give torque with the help of the ratchet.

Overdent Screwdriver (LLKOD 250)

The square end allows the overdent abutment to be screwed and the opposite end allows the retention insert to be placed in the overdent cover.

Multi-unit Screwdriver (LLCAMU 174 y LLCAMU 244)

They are used to place straight multi-unit with the help of the ratchet. Available in two lengths: 17,4 and 24,4 millimeters.

Prosthetic Screwdriver (LLCAC 160 y LLCAC 250)

They connect to the manual screwdriver and are used to provide torque. Available in two lengths: 16 and 25 millimeters.

Screwdriver direct from ratchet to implant (LLCAI 220 y LLCAI 290)

With the help of the ratchet and connected directly to the internal connection of Galimplant implants, they allow their insertion. Available in two lengths: 22 and 29 millimeters.

Direct motor Screwdriver (LLMI 295)

With the help of the motor and connected directly to the internal connection of the Galimplant implants, it allows their insertion.

Prosthetic motor Screwdriver (LLMTP 220 y LLMTP 290)

These wrenches allow you to provide torque connected to the engine. Available in two lengths: 22 and 29 millimeters.

Short, long and manual adapter (DC 144, DL 244 y DMA 150)

The short and long adapters are used to connect to the implant carrier and insert the implant with the help of the ratchet. The manual socket connected to the implant carrier is used to insert the implant manually.

Motor Screwdriver (LLM 215)

Connected to the motor and the implant carrier, it allows the implant to be inserted.

“Committed to offering you solutions that provide **maximum aesthetics**, along with a **safe and predictable treatment**”
